

We are ...

Advanced Rebar Applications, an independent service company specializing in the development of reinforcing steel (rebar) placing drawings and material listings (barlists) for construction documentation and installation. While located just outside Buffalo, NY, our clients and their projects are located through the Eastern US.

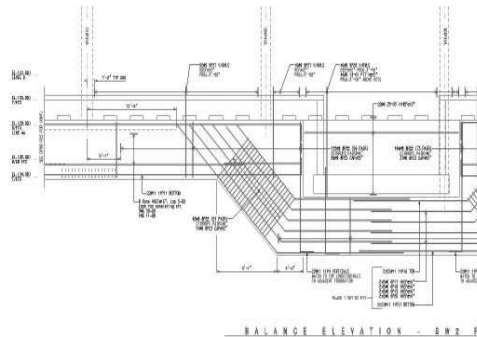

Service ...

Advanced Rebar Applications has the strong understanding of reinforcing steel and its application to concrete structures. Our placing drawings are developed with these understandings and in conjunction with the implementation of ACI and CRSI detailing standards and specifications. Our placing drawings are created using computer aided drafting software submitted electronically or through traditional printed methods as determined by the project's requirements. Material listings are created for every placing drawing we create. Material lists are created as per client requests and through communication to the client's customer.

When you're giving your best to the project....

Don't you want the same...
given to you?
